To ensure the continuous development and improvement of our products, we reserve the right to make changes to the colour, design and descriptions or methods of manufacture of our furniture. Such changes may be made without prior notice and without incurring liability. In many of our products we use wood, a natural living material which will reflect a variety of grains and textures and so variances must be allowed for. Styles that feature timber, PVC, laminates and melamine finishes may incur a slight colour change over the years. The term 'solid timber' applies to door and drawer fronts only. Colour reproduction in this brochure is as accurate as printing techniques will allow. Not every showroom contains all the products featured in this brochure. COUNTERTOPS

28mm LAMINATE COUNTERTOPS

Eleven gloss laminate square edged countertop finishes are available to co-ordinate across fitted and modular units. Edging tape is supplied with selected countertops.

LAMINATE COUNTERTOPS (Fitted & Modular Units)

30mm SOLID SURFACE COUNTERTOPS

Three solid surface countertops with a non porous solid acrylic surface bonded to a chipboard core, offering all the advantages of traditionally thicker solid surfacing but at a fraction of the cost.

30mm PVC WRAPPED COUNTERTOPS (Modular Wall Hung Units)

Two PVC countertops consisting of 30mm moisture-resistant PVC-wrapped MDF. Available for modular units only to co-ordinate with Gloss White and Oak ranges.

22mm COUNTERTOPS

These 22mm thick countertops are PVC edged all round, so can be used either as a countertop or as a blender panel on base and wall units to fully frame your units, giving you a stunning contemporary look.

Getting started

To begin with take an accurate measurement of your bathroom. Check the height from the floor to window sill to make sure that base units will fit underneath the window.

Check the dimensions and positions of windows, doors and any other obstructions, e.g. radiators, towel rails, soil and vent pipes and light switches, as these will determine the layout of your bathroom.

Transfer your room dimensions on to graph paper so that you can produce a scale drawing (use 1:10 or 1:20 scale). Mark the position of any waste pipes, soil pipes and incoming water supplies. The location of plumbing affects everything else, so this must be highlighted at the start. Remember though that the beauty of fully fitted bathroom furniture is that your bathroom can be designed to completely conceal unsightly pipework.

Top Tip

If you are using wall units, try to get them to co-ordinate in size with your base units as this will be pleasing to the eye.

The next step is to list all the items you would like to have in your bathroom: shower, bath, hand basin, W/C, furniture pieces and storage units, mirror, towel rail, etc. Obtain measurements of all these items and then add them to your plan. Available dimensions for all Aquadi bathroom furniture can be found on the following page.

Once you have positioned your furniture on the plan you will be able to take final measurements of the runs of furniture and work out what size of countertop you will need.

Finally you can think about accessories. One of the most important things to consider is lighting. Aquadi offers a number of bathroom lighting options which are all IP regulated. You could choose LED Chrome Spotlights set into a flyover shelf, or flexible LED strip lighting underneath wall units. The illuminated mirrors are a 'must have' for any contemporary bathroom.

Top Tip

Always remember to allow for filler panels between a fitted unit and a wall. This prevents the unit door handle clashing against the wall and makes certain that the run of furniture will fit into your chosen space.

Space

The bathroom can often be one of the smallest rooms in the house, so if space is an issue or you are planning a cloakroom you may like to consider reduced depth bathroom furniture.

Aquadi offers a wide selection of base units with a depth of only 200mm across all ranges*. You may also like to consider the Cloakroom basin unit, a compact storage and basin solution which is perfect for smaller spaces.

*Except Linear and Naples

LINDO FITTED UNIT DIMENSIONS (INCLUDING NAPLES)†

Available Widths and Heights (mm)

†Naples only available in 300mm and 600mm base units, 600mm basin unit and 600mm WC unit.

LINEAR FITTED UNIT DIMENSIONS

Available Widths and Heights (mm)

Installation Guide

Always check for electrical wires, water pipes or other services before drilling the wall.

Lindo Base Units

Set height for base units at 811mm on wall above lowest point. Plumb and secure firmly through back rail and brackets. Adjust leg for base support. Scribe into side panels and plinth as required. It is recommended to seal plinth with plinth seal (PLINTHS). Continue adding adjoining units, screwing or bolting together and fixing as above. The Lindo Collection base units are boxed out at the rear to allow waste pipes to be run along the back of the units. In this scenario cut out the back of the side panel as required to fit/hold waste pipes (see below).

Lindo Wall Units

Determine the exact location of the unit(s) and mark a horizontal line 1831mm from the floor. Mark the position of each unit. Fit the hanging bracket plates to the wall and use adjustment to level. Secure with additional fixings through back support rail or bracket. Continue adding adjoining units, screwing or bolting together and fixing as above.

Modular Units

Firmly screw brackets to wall and use adjustment to level. Secure with additional fixings through back support rail or bracket.

IMPORTANT

All units should be fitted by a qualified fitter. Any screws and other fixings used must be suitable to support the units when loaded into the material they are to be fitted. When fitting handles please be aware that doors are not pre-drilled for the handle. The drillings on the doors may be different between two doors in the same range, so we strongly recommend that each handle is measured and the door marked and drilled to fit the handle.
